- ReactJS
- NextJS
- ExpressJS
- NestJS
- Java
- Go
- Python
- NoSQL / SQL
- Docker

Languages

- English
- Mandarin
- Malay

Profile

I'm Liam Tat Tze Tey, a Software Engineer, and Fullstack Web Developer. I was born in Malaysia, but I'm living in London, UK. In the past two years, I have been learning web and mobile app development, which comply with the latest trends and technologies. I provide the solution to help businesses or individuals by converting their vision and ideas into applications. As a tech enthusiast, there is nothing that can stop me from learning new cool technologies!

Educations

Middlesex University (London, UK)

September 2021 - July 2022

- Bachelor's degree in Computer Science (Year 3)

Asia Pacific University (Malaysia)

April 2019 - April 2021

- Bachelor's degree in Software Engineering (Year 1 & Year 2)

Experiences

Setel Ventures (Malaysia)

Full-stack Web Developer (Internship)
April 2021 - August 2021 (16 weeks)

- I had a very great experience and moment during the internship in Setel Ventures because the employees in Setel treat each other as one of their families. During my hard time, my supervisor and colleague were guiding me to solve the problems that I faced. In addition, I have learned a lot of new tech and skills during my internship. My main position during the internship was a Full-stack engineer because my main task and job is to develop new features for the web application. For example, most of my Jira tickets are focused on migrating the legacy code from Angular to ReactJS. Therefore, the main technologies that I have learned were including ReactJS, Typescript, NestJS, etc. On the other hand, I have also learned the workflow of the Agile Scrum team because the Setel Ventures are enforcing their employees to follow the Agile Scrum methodology by using different modern tools such as Jira. After the internship, I have also gained many experiences in web development and agile scrum methodology.
